### **Contents**

1	Generating Combinatorial Objects			
	1.1	Subsets		
2		tracking		
	2.1	Knapsack		
	2.2	Generating all cliques		
	2.3	Exact cover		
	2.4	Exercises		
In	dev			

### **Chapter 1**

### **Generating Combinatorial Objects**

#### 1.1 Subsets

#### 1.1.1 KSSubsetLexRank

▷ KSSubsetLexRank(number, subset)

(function)

Returns the rank of subset as a subset of the set of numbers from 1 to number (Algorithm 2.1).

#### 1.1.2 KSSubsetLexUnrank

▷ KSSubsetLexUnrank(number, rank)

(function)

Returns the subset of {1..number} whose rank is rank. (Algorithm 2.2).

### Chapter 2

### **Bactracking**

#### 2.1 Knapsack

#### 2.1.1 KSCheckKnapsackInput

> KSCheckKnapsackInput(profits, weights, capacity)

(function)

Checks for valid input data for the Knapsack problems (Problems 1.1-1.4).

#### 2.1.2 KSKnapsack1

▷ KSKnapsack1(profits, weights, capacity)

(function)

Implementation of Algorithm 4.1.

#### 2.1.3 KSKnapsack2

▷ KSKnapsack2(profits, weights, capacity)

(function)

Implementation of Algorithm 4.3.

#### 2.2 Generating all cliques

#### 2.2.1 KSAllCliques

▷ KSAllCliques(graph)

(function)

Implementation of Algorithm 4.4. A graph G is defined by the list graph, which must be a list of subsets of  $\{1,...,n\}$ , for some integer n. The neighbors of vertex i are the elements of graph[i].

kreher-stinson 6

#### 2.3 Exact cover

#### 2.3.1 KSExactCover

▷ KSExactCover(number, cover)

(function)

Finds an subcollection of *cover* (which is a set of subsets of  $\{1,..,number\}$ ) that is an exact cover of  $\{1,..,number\}$ , if it exists.

#### 2.4 Exercises

#### 2.4.1 KSQueens

Solves the n queens problem for a  $size \times size$  board.

### **Index**

```
KSAllCliques, 5
KSCheckKnapsackInput, 5
KSExactCover, 6
KSKnapsack1, 5
KSKnapsack2, 5
KSQueens, 6
KSSubsetLexRank, 4
KSSubsetLexUnrank, 4
```
